Description

This system allows easy transport from breeder farm to hatchery with minimal egg handling, which reduces the risk of cracked eggs. The hatching eggs are collected on stackable Petersime HD trays (84 chicken eggs) and stacked on a corresponding pallet. The maximum stacking height is 20 levels which makes that each pallet can contain 6,720 chicken eggs.

At the bottom of the stack and after every 8 levels of trays, a connector is used for good stability. Using additional straps or shrink wrap to ensure solid and secure transport is not needed.

The pallet with eggs can easily be transported by means of a pallet jack. The pallet and connector are made of solid plastic and therefore allow easy cleaning and disinfection. It is possible to fumigate the eggs on the pallet as well.

Specifications

Capacity

- ▶ 6,720 chicken eggs per pallet (20 levels)
- ▶ 4 stackable Petersime HD trays (84 chicken eggs) per level

Dimensions Connector

Length	1035 mm
Width	760 mm
Height	55 mm

Material

- ▶ Polypropylene, gray
- ▶ Weight: 1,7 kg

Dimensions Pallet

Length	1030 mm
Width	755 mm
Height	170 mm

Material

- ▶ High-density polyethylene (HDPE), white
- ▶ Weight: 10,7 kg
