INCUBATORS & HATCHERIES

Hatchery Alert System™

Electronic alert system for your hatchery

Features & benefits

- ▶ Large dummy proof touchscreen display (21 inch)
- ▶ Status overview of up to 96 incubators
- ▶ Independent cabling system
- ▶ Power supply with battery backup
- ▶ Acoustic alarm function
- ▶ Can be connected to external alarm signals

WHEN[®]
CHICKS
COUNT

Description

Petersime's electronic Hatchery Alert System™ is a configurable system that allows managing alarms of up to 96 machines or input devices (HVAC, non-Petersime incubators,...). In larger hatcheries, various screens can be placed in cascade. It is possible to duplicate displays in order to have control in different rooms. The Hatchery Alert System™ is dust and waterproof (IP67).

The display has different indications for the alarm status. User identification is possible with a personal code and

every activity is logged. An acoustic alarm will warn you in the hatchery. A telephone dialer can be connected and configured, this enables you to get informed about an alarm when outside the hatchery.

The Hatchery Alert System™ has an independent cabling system and a power supply with battery backup to ensure operational continuity in case of power or network failure.
